

Ex. No.: 5**Date: 27.09.24****PROCESS CODE INJECTION****Aim:**

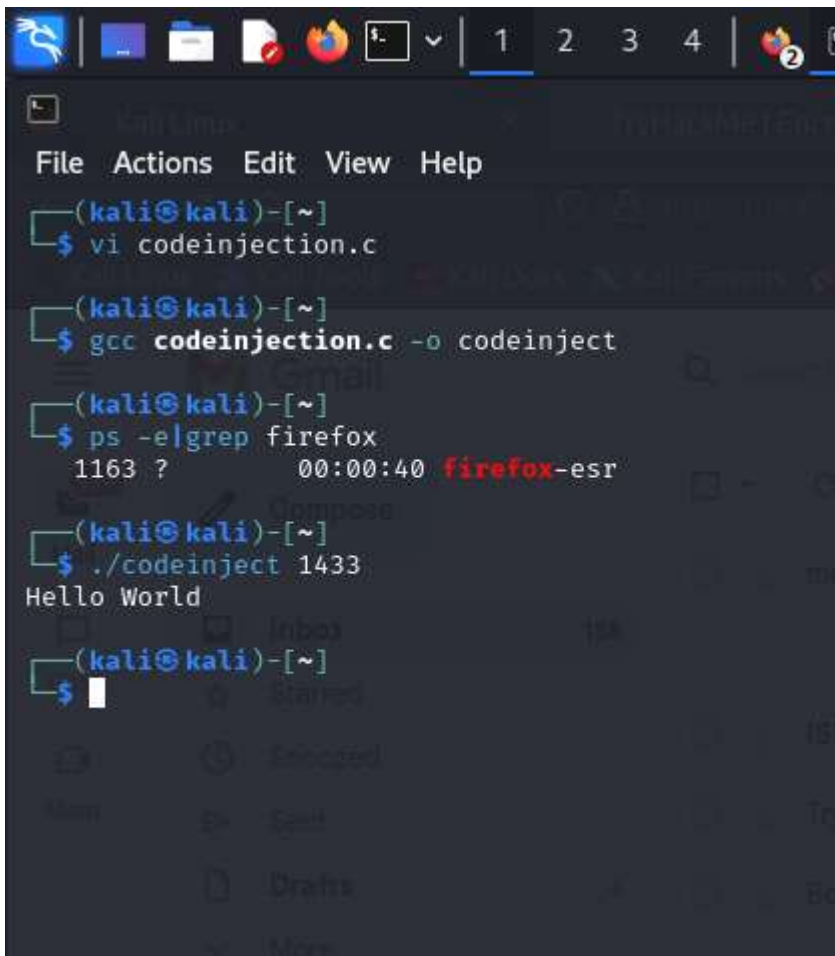

To do process code injection on Firefox using ptrace system call.

Algorithm:

1. Find out the pid of the running Firefox program.
2. Create the code injection file.
3. Get the pid of the Firefox from the command line arguments.
4. Allocate memory buffers for the shellcode.
5. Attach to the victim process with `PTRACE_ATTACH`.
6. Get the register values of the attached process.
7. Use `PTRACE_POKE TEXT` to insert the shellcode.
8. Detach from the victim process using `PTRACE_DETACH`

Output:

```
[root@localhost ~]# vi codeinjection.c
[root@localhost ~]# gcc codeinjection.c -o codeinject
[root@localhost ~]# ps -e|grep firefox
1433 ?      00:01:23 firefox
[root@localhost ~]# ./codeinject 1433
----Memory bytecode injector----- Writing
EIP 0x6, process 1707
[root@localhost ~]#
```

```
File Actions Edit View Help
(kali@kali)-[~]
$ vi codeinjection.c
(kali@kali)-[~]
$ gcc codeinjection.c -o codeinject
(kali@kali)-[~]
$ ps -e|grep firefox
1163 ?        00:00:40 firefox-esr
(kali@kali)-[~]
$ ./codeinject 1433
Hello World
(kali@kali)-[~]
$
```

Result: Thus, the process code injection on Firefox has been successfully executed.
